## Introduction

As part of our project, we are tasked to answer the question “What are the most valued data science skills?” by working as a team, deciding what data to collect and how to collect it, use relational database and set of normalized tables and data exploration and analysis. Our team members are as follows;

- Anil Akyildirim
- Nicholas Chung
- Jai Jeffries
- Tamiko Jenkins
- Joe Rovalino
- Sie Siong Wong

As part of project management tools, we have used Slack Private channel and Skype for Project Communication, Github for Project tracking, documentation and code collaboration, and Amazon Relational Database Service for data integration. All of our supporting code and data are on the GitHub repo, which documents branches and commits from our team.

- GitHub: <https://github.com/pnojai/dskill>
- Amazon Relational Database Service: [msds607.ckxhi71v1dqf.us-east-1.rds.amazonaws.com](https://msds607.ckxhi71v1dqf.us-east-1.rds.amazonaws.com)

## Load Data

### Data Collection

We have reviewed and discussed different data types such as current job requirements around data scientists from job postings such as indeed.com or monster.com and articles around top data scientists skills in websites such as [towardsdatascience](https://towardsdatascience.com) and [knuggets](https://knuggets.com). Our approach built on the assumption that data scientists with jobs have the skills most valued by employers. We collected skills from employed data scientists.

we were inspired by the research of Jeff Hale whose article on data science skills appeared on the website, Medium.

- <https://towardsdatascience.com/the-most-in-demand-skills-for-data-scientists-4a4a8db896db>.

We discussed different methods of collecting the data and further how we can store it. As a result, we decided to work with usefull data within linkedin.com. We compared our findings from LinkedIn data to Mr. Hale's 2018 findings.

## Load JSON files

```
# load all JSON
filenames <- list.files("data/profiles", pattern="*.json", full.names=TRUE) # this should give you a ch
example_file <- lapply(filenames[1], function(x) jsonlite::fromJSON(txt = x)) # a list in which each el
example_file

## Structure Data

### Bind fromJSON results

```
# apply fromJSON to read in all of the json files
# create the column (variable) title, headline, which will be populated with json file identifying info
# extract the skills data which contains the variables title and counts
# bind the results together as a data frame named r_df
r_df <- dplyr::bind_rows(sapply(filenames, function(x) fromJSON(x, flatten=TRUE)$skills), .id="headline"
```

### Extract Headlines

```
# apply fromJSON to read in all of the json files
# extract the headline variable from the profile data, saving each file name as the variable title
# save the mapping as data frame headlines
headlines <- sapply(filenames, function(x) fromJSON(x, flatten=TRUE)$profile$headline, USE.NAMES = TRUE)
```

### Map Headlines to Skills

```
# apply a look up of the variable title specifying the filename
# and add the headline value from the headlines data frame
# to the headlines variable in data frame r_df

r_df$headline <- sapply(r_df$headline, function(x) headlines[x])
```

## Format Data

### Name and convert variables and data

```
df <- r_df
# TODO: conform names to db
# TODO: Fix naming call
# TODO: find out which naming convention we're using
# display data frame r_df
head(df)
```

```
##           headline           title count
## 1 Data Scientist at Square      Python    11
## 2 Data Scientist at Square         R      9
## 3 Data Scientist at Square        C++      7
## 4 Data Scientist at Square Data Structures    5
## 5 Data Scientist at Square   Statistics      2
## 6 Data Scientist at Square Machine Learning    2
```

```
# name r_df
names(df) <- c("title", "skills", "count")
#names(v) <- c("headline", "skills", "linkedin")
class(df)
```

```
## [1] "data.frame"
```

```
# create numeric values in LinkedIn counts column
# coerce any nulls to na's
sapply(df, class)
```

```
##           title           skills           count
## "character" "character" "character"
```

```
df$count <- as.numeric(df$count)
sapply(df, class)
```

```
##           title           skills           count
## "character" "character" "numeric"
```

### Remove NA's from numeric column

```
# count all rows
# 4822
# view a subset of rows with na's mixed with complete rows
nrow(df)
```

```
## [1] 4822
```

```
df[11:20,]
```

```

```

```
nrow(df)
```

```
## [1] 3880
```

## Store Data

### Prepare data values for storage

```
# TODO: 1) I think we just need a names () on the column missing the column name
# Done
# TODO: 2) I have to research how to remove unicode
# suggest
# rs <- dbSendQuery(con, 'SET NAMES utf8')
# ALTER TABLE mytable CONVERT TO CHARACTER SET utf8mb4;

# TODO: 3)remove termination of comma
# TODO: can we try this: texts(df) <- iconv(texts(df, from = "UTF-8", to = "ASCII", sub = ""))
# https://cran.r-project.org/web/packages/quanteda/quanteda.pdf
# stripped all the Unicode characters
# stripped all the commas from the fields for skill and title

# Example of dirty data obtained with \d,"[~"]+,
# line 256: "396","Python",31,"Data Scientist at Conde Nast • MS in Data Science, Columbia University •

#x <- c("396","Python",31,"Data Scientist at Conde Nast • MS in Data Science, Columbia University • III
#validUTF8(x)
#validUTF8(xx)
```

```

# TODO: follow df.csv convention

# Add rownames (indices) as a skill id
# to final dataframe to prepare for
# SQL-based storage and to provide option to
# remove automatic row names from write csv
# Remove depr function
df_csv <- add_rownames(df, var = "skill_id")

# NB: these are the original row id's based on R records
# to generate skill_ids without skips for na's removed
# use a seq
df_csv <- tibble::rownames_to_column(df_f, var = "skill_id")
df_csv$skill_id <- as.numeric(df_csv$skill_id)
head(df_csv)

##   skill_id          title      skills count
## 1         1 Data Scientist at Square      Python    11
## 2         2 Data Scientist at Square           R      9
## 3         3 Data Scientist at Square          C++      7
## 4         4 Data Scientist at Square Data Structures    5
## 5         5 Data Scientist at Square   Statistics      2
## 6         6 Data Scientist at Square Machine Learning    2

# TODO: follow df.csv convention
# Rearrange column order with dplyr select
df_csv <- dplyr::select(df_csv, skill_id, skills, count, title)

head(df_csv)

##   skill_id      skills count          title
## 1         1      Python    11 Data Scientist at Square
## 2         2           R      9 Data Scientist at Square
## 3         3          C++      7 Data Scientist at Square

```

## Write to csv

```

# write csv and upload to our mysql database
# Encoding(df_csv)
write.csv(df_csv, "results/df_alt.csv", row.names=FALSE, fileEncoding="UTF-8")

```

## Load Data

### Load the data from the database

```

# load the data in the database and look at 2018 Linkedin Data
user_name <- 'anil'
user_password <- "redy2rok"
database <- 'prj3'
host_name <- 'msds607.ckxhi71v1dqf.us-east-1.rds.amazonaws.com'

```

```
#connecting to the MySQL database
```

```
myDb <- dbConnect(RMariaDB::MariaDB(), user=user_name, password=user_password, dbname=database, host=host)
myDb
```

```
## <MariaDBConnection>
```

```
## Host: msds607.ckxhi71vidqf.us-east-1.rds.amazonaws.com
```

```
## Server: 5.7.22-log
```

```
## Client: 5.5.1
```

## View tables

```
#list of tables we have
```

```
dbListTables(myDb)
```

```
## [1] "agg_linkedin" "df"
```

```
## [3] "ds_general_skills_clean" "dsmain"
```

## Visualizing the Data

### Improvements

```
#We have 1157 observations (skills) that data science roles use in linkedin
#let's see the distribution
```

```
theme_set(theme_classic())

ggplot(df, aes(x=Skills, y=Linkedin))+
  geom_bar(stat="identity", width = 0.5, fill=("tomato2"))+
  theme(axis.text.x = element_text(angle = 65, vjust=0.6))
```

```
# we have way too many skills so let's only focus on the ones that has significant count
```

```
df <- filter(df, Linkedin >100)
df
```

```

theme_classic() + labs( x = "Skill endorsements", y = "Average skill endorsements", title = paste( "Comparing
2018 and 2019 LinkedIn Skills samples" ) )
```

## Conclusions

The six data science skills most valued by employers in 2019 appear to be the following.

1. Data analysis
2. R
3. Python
4. SQL
5. Statistics
6. Machine learning

Our approach differed from Mr. Hales. He investigated programming languages as a separate research question. Our approach commingles them. Therefore, though our high-ranking skills list includes the languages R, Python, and SQL, nothing is to be concluded from their absence from Hale's list. What we see in common are the skills of analysis, statistics, and machine learning. We believe the data tell a compelling story about investment in these disciplines.
